parts.

Hydrology and Water Supply for Pond Aquaculture Kyung H. Yoo, Claude E. Boyd
In 1979, several graduate students in the Department of Fisheries and Allied Aquacultures at Auburn
University met with one of the authors (CEB) and asked him to teach a new course on water supply for aqua
culture. They felt that information on climatology, hydrology, water distribution systems, pumps, and wells
would be valuable to them. Most of these students were planning to work in commercial aquaculture in the
United States or abroad, and they thought that such a cdurse would better prepare them to plan aquaculture
projects and to communicate with engineers, contractors, and other specialists who often become involved in
the planning and construction phases of aquaculture en deavors. The course was developed, and after a few
years it was decided that more effective presentation of some of the material could be made by an engineer.
The other author (KHY) accepted the challenge, and three courses on the water supply aspects of aquaculture
are now offered at Auburn University. A course providing background in hydrology is followed by courses
on selected topics from water supply engineering. Most graduate programs in aquaculture at other
universities will even tually include similar coursework, because students need a formal intro duction to this
important, yet somewhat neglected, part of aquaculture. We have written this book to serve as a text for a
course in water supply for aquaculture or for individual study. The book is divided into is concerned two
