Social Behavior of Female Vertebrates

Samuel Wasser

Social Behavior of Female Vertebrates Samuel Wasser

Social Behavior of Female Vertebrates focuses on the evolution of reproductive behavior in female vertebrates ranging from fish to birds and humans, including issues of mate choice and other factors underlying female attitudes toward males. It also looks at the evolution of mating systems; the co-evolution of the sexes; sex-role reversal; reproductive competition between females; maternal behavior; and how females enhance the investment received by their offspring from others. It also considers other social behaviors that influence the nature of affiliative associations between females.

Organized into three parts encompassing 13 chapters, this volume begins with an overview of behavioral biology and sources of variation in female reproductive success. It then discusses the establishment and maintenance of sex biases, sex differences mediated by sexual selection, constraints on female choice in the mottled sculpin, mate choice by females in sexual selection of bird song, and female manipulation of male avoidance of cuckoldry behavior in the ring dove. The reader is also introduced to the evolution of polyandry in shorebirds; reproductive strategies in human females; social and health-seeking behaviors of Taiwanese women; female roles in cooperatively breeding acorn woodpeckers; altruism in coati bands; cooperation and reproductive competition among female African elephants; mate choice in matrilineal macaque groups; and reproductive competition and cooperation among female yellow baboons.

This book is a valuable resource for scientists and behavioral biologists, as well as lay people whose interests span a variety of fields.
