As information availability pervades every aspect of life, new trends, technologies, and enhancements must be carefully researched, evaluated and implemented in order to fabricate successful computing applications.

Designing Solutions-Based Ubiquitous and Pervasive Computing: New Issues and Trends examines current practices and challenges faced by designers of Ubiquitous and Pervasive Computing projects. Analyzing theoretical assumptions, empirical research, practical implementations, and case studies, this book intends to present a comprehensive yet concise overview of the recent progress in ubiquitous and pervasive computing applications, as well as discuss new methodologies, technologies and approaches currently practiced. Truly interdisciplinary, this publication serves as a valuable reference for researchers in the fields of electrical engineering and computer science, students, educators, and industrial trainers interested in network sensors, embedded systems, distributed systems, computer networks, and computer science.
