Assessing the Educational Data Movement (Technology, Education--Connections (TEC) Series) Philip J. Piety

"Phil Piety's book employs insights from the learning sciences to illuminate policies and practices for using information to improve American education. His analyses reveal deeply-held convictions by educators concerning uses of data and why some of the test-based policies of the educational data movement—including No Child Left Behind and value-added models for teacher evaluation—have turned out more challenging in practice than in theory. Piety highlights our need to understand the multi-layered social nature of education, recognize a number of fundamental characteristics of educational data, and to integrate design-based principles for enhancing the socio-technical activity we call schooling."

—**Roy Pea**, David Jacks Professor of Education and Learning Sciences, Stanford University

"Unquestionably there has been a dramatic change in the collection and use of education data within a relatively short period of time. This critically important book highlights what constitutes the education data movement describing the vernacular of what every education researcher, practitioner, and policymaker needs to be aware of. Cautiously optimistic about the future, Piety points out the challenges educators will face as they struggle with their ever increasingly complex datasets and how they can be made useful for measuring learning, teacher quality, and organizational change."

—**Barbara Schneider** is the John A. Hannah Chair and University Distinguished Professor in the College of Education at Michigan State University, and president of the American Educational Research Association, 2013-14.

"Everyone who wants to gain a better understanding of how data is transforming education should read this book. Piety's analysis is comprehensive and covers every dimension of the American education system. He impressively connects the dots among the numerous institutions and actors that comprise the data movement. This book is a triumph."

—**Darrell West**, Vice President and Director of the Center for Technology Innovation, Brookings Institution

"Piety brings a fresh perspective to 'the educational data movement,' situating its emergence historically, linking it to developments in various institutional fields, and framing it as a 'sociotechnical revolution.' Essential reading! Both proponents and opponents of the 'data movement' will learn from this book."

—**James P. Spillane**, Spencer T. & Ann W. Olin Professor in Learning & Organizational Change, Northwestern University

For better or worse, many educational decisions that were once handled on a personal level by teachers or administrators now increasingly rely upon data and information. To be successful in this era, educators need to understand this broad sociotechnical revolution and how it is realigning traditional roles and responsibilities. In this book, the author draws on his unique background in learning sciences, education policy, and information systems to provide valuable insights for both policy and practice. The text discusses many current topics including technology-rich models of teacher evaluation, big data and analytics, longitudinal data systems, open educational resources, blended and personalized learning models, and new designs for teaching.

This comprehensive book:

- Examines the social and historical context of the educational data movement as it unfolds across educational levels.
- Synthesizes different research traditions from inside and outside of education.
- Assesses the successes, challenges, and potential of data analytics.
- Helps educators and innovators design technology-rich solutions for greater student success.
- Discusses the catalytic role that foundations have played in making education a more informational and evidence-based practice.

Philip J. Piety is a national expert in educational data, founder of ED InfoConnections, a benefit corporation serving to improve the information educators use, and a faculty affiliate of Johns Hopkins University.

From reader reviews:

Salvatore Anthony:

This Assessing the Educational Data Movement (Technology, Education--Connections (TEC) Series) is great reserve for you because the content which can be full of information for you who have always deal with world and also have to make decision every minute. This book reveal it data accurately using great plan word or we can declare no rambling sentences in it. So if you are read this hurriedly you can have whole facts in it. Doesn't mean it only provides straight forward sentences but challenging core information with splendid delivering sentences. Having Assessing the Educational Data Movement (Technology, Education--Connections (TEC) Series) in your hand like finding the world in your arm, facts in it is not ridiculous one. We can say that no e-book that offer you world in ten or fifteen small right but this guide already do that. So , this really is good reading book. Hi Mr. and Mrs. occupied do you still doubt that?

Kellie Stephens:

It is possible to spend your free time to see this book this e-book. This Assessing the Educational Data Movement (Technology, Education--Connections (TEC) Series) is simple bringing you can read it in the recreation area, in the beach, train along with soon. If you did not possess much space to bring the actual printed book, you can buy the e-book. It is make you easier to read it. You can save the actual book in your smart phone. Consequently there are a lot of benefits that you will get when one buys this book.

Martha Dixon:

With this era which is the greater individual or who has ability to do something more are more valuable than other. Do you want to become among it? It is just simple approach to have that. What you should do is just spending your time very little but quite enough to possess a look at some books. One of the books in the top checklist in your reading list is definitely Assessing the Educational Data Movement (Technology, Education--Connections (TEC) Series). This book which is qualified as The Hungry Inclines can get you closer in turning into precious person. By looking way up and review this publication you can get many advantages.

Helen Widner:

That e-book can make you to feel relax. This kind of book Assessing the Educational Data Movement (Technology, Education--Connections (TEC) Series) was bright colored and of course has pictures around. As we know that book Assessing the Educational Data Movement (Technology, Education--Connections (TEC) Series) has many kinds or category. Start from kids until teens. For example Naruto or Investigator Conan you can read and think you are the character on there. Therefore not at all of book are usually make you bored, any it offers up you feel happy, fun and relax. Try to choose the best book for yourself and try to like reading which.
