Categorical Data Analysis Using the SAS System Maura E. Stokes

Statisticians and researchers will find Maura Stokes, Charles Davis, and Gary Koch's *Categorical Data Analysis Using the SAS System*, Second Edition, to be a useful discussion of categorical data analysis techniques as well as an invaluable aid in applying these methods with SAS. Practical examples from a broad range of applications illustrate the use of the `FREQ`, `LOGISTIC`, `GENMOD`, and `CATMOD` procedures in a variety of analyses. Other procedures discussed include the `PHREG` and `NPAR1WAY` procedures. Topics discussed include assessing association in contingency tables and sets of tables, logistic regression and conditional logistic regression, weighted least squares modeling, repeated measurements analyses, log-linear models, and bioassay analysis. The second edition has been revised for use with SAS 8. New topics include additional exact tests, generalized estimating equations, use of the `CLASS` statement in the `LOGISTIC` procedure, exact logistic regression using the `LOGISTIC` procedure, and comparisons of the use of subject-specific models versus population-averaged models.
