## Finely Dispersed Particles: Micro-, Nano-, and Atto-Engineering: 130 (Surfactant Science)

Over the last decade, the biggest advances in physical chemistry have come from thinking smaller. The leading edge in research pushes closer to the atomic frontier with every passing year. Collecting the latest developments in the science and engineering of finely dispersed particles and related systems, *Finely Dispersed Particles: Micro-, Nano-, and Atto-Engineering* explores heat, mass, momentum and electron transfer phenomena of well-characterized interfaces at the milli-, micro-, nano-, and atto-scales.

An interdisciplinary team of leading experts from around the world discuss recent concepts in the physics and chemistry of various well-studied interfaces of rigid and deformable particles in homo- and hetero-aggregate dispersed systems, including emulsions, dispersoids, foams, fluosols, polymer membranes, and biocolloids. The contributors clearly elucidate the hydrodynamic, electrodynamic, and thermodynamic instabilities that occur at interfaces, as well as the rheological properties of interfacial layers responsible for droplets, particles, and droplet-particle-film structures in finely dispersed systems. The book examines structure and dynamics from various angles, such as relativistic and non-relativistic theories, molecular orbital methods, and transient state theories.

With a comprehensive survey of our current understanding, *Finely Dispersed Particles: Micro-, Nano-, and Atto-Engineering* provides a solid platform for further exploration and discovery at increasingly smaller scales.

Your reading 6th sense will not betray anyone, why because this Finely Dispersed Particles: Micro-, Nano-, and Atto-Engineering: 130 (Surfactant Science) guide written by well-known writer who knows well how to make book that can be understand by anyone who else read the book. Written with good manner for you, still dripping wet every ideas and publishing skill only for eliminate your current hunger then you still skepticism Finely Dispersed Particles: Micro-, Nano-, and Atto-Engineering: 130 (Surfactant Science) as good book not merely by the cover but also by the content. This is one publication that can break don't evaluate book by its cover, so do you still needing a different sixth sense to pick that!? Oh come on your reading sixth sense already alerted you so why you have to listening to an additional sixth sense.
