Immune System Modelling and Simulation

Filippo Castiglione, Franco Celada

Immune System Modelling and Simulation Filippo Castiglione, Franco Celada

The book describes a computational model of the immune system reaction, C-ImmSim, built along the lines of the computer model known as the Celada-Seiden model (CS-model). The computational counterpart of the CS-model is called IMMSIM which stands for IMMune system SIMulator. IMMSIM was written in 1992 by the physicist Phil E. Seiden and the immunologist Franco Celada. This model was built around the idea of developing a computerized system to perform experiments similar in vivo experiments; a tool developed to help biologists testing theories and hypothesis about how the immune system works.

C-ImmSim is best viewed as a collection of models in a single program. It incorporates the principal core facts of today's immunological knowledge, such as the diversity of specific elements, MHC restriction, clonal selection, thymic education of T cells, antigen processing and presentation (both the cytosolic and endocytic pathways are implemented), cell-cell cooperation, homeostasis of cells created by the bone marrow, hyper mutation of antibodies, maturation of the cellular and humoral response, and memory. Besides, an antigen can represent a bacterium, a virus, or an allergen or a tumor cell. C-ImmSim has been recently customized to simulate the HIV-1 infection. Moreover, it can simulate the immunotherapy for cancer. These features are all present in the code and people can choose to turn them on and off at compiling time.

The book presents the basic model as well as the various customizations to implement the description of different diseases and the way they have been used in practice to produce new knowledge either from hypothesis or from lab-experiment data. In this respect, the book can be used as a practical guide to implement a computational model with which to study a specific disease and to try to address realistic clinical questions.

From reader reviews:

Frank Lantz:

Reading a guide can be one of a lot of task that everyone in the world loves. Do you like reading book therefore. There are a lot of reasons why people like it. First reading a book will give you a lot of new info. When you read a publication you will get new information because book is one of various ways to share the information or even their idea. Second, examining a book will make anyone more imaginative. When you reading through a book especially fiction book the author will bring that you imagine the story how the character types do it anything. Third, it is possible to share your knowledge to some others. When you read this Immune System Modelling and Simulation, you could tells your family, friends in addition to soon about yours e-book. Your knowledge can inspire average, make them reading a book.

Lurline Silvester:

Do you have something that you enjoy such as book? The publication lovers usually prefer to decide on book like comic, quick story and the biggest an example may be novel. Now, why not attempting Immune System Modelling and Simulation that give your fun preference will be satisfied by means of reading this book. Reading routine all over the world can be said as the method for people to know world better then how they react to the world. It can't be stated constantly that reading routine only for the geeky individual but for all of you who wants to always be success person. So , for all you who want to start studying as your good habit, you are able to pick Immune System Modelling and Simulation become your starter.

Robert Burmeister:

Do you like reading a book? Confuse to looking for your best book? Or your book ended up being rare? Why so many problem for the book? But any kind of people feel that they enjoy to get reading. Some people likes reading, not only science book but in addition novel and Immune System Modelling and Simulation as well as others sources were given information for you. After you know how the truly amazing a book, you feel wish to read more and more. Science e-book was created for teacher or students especially. Those guides are helping them to add their knowledge. In various other case, beside science reserve, any other book likes Immune System Modelling and Simulation to make your spare time much more colorful. Many types of book like here.

Lashunda McCloud:

What is your hobby? Have you heard in which question when you got learners? We believe that that query was given by teacher on their students. Many kinds of hobby, Every individual has different hobby. And also you know that little person such as reading or as reading through become their hobby. You need to know that reading is very important and book as to be the point. Book is important thing to increase you knowledge, except your current teacher or lecturer. You get good news or update regarding something by book. Many kinds of books that can you choose to adopt be your object. One of them is this Immune System Modelling

and Simulation.
