Pediatric Neurology Part I: Chapter 10. Chronic pediatric diseases into adulthood and the challenge of adolescence (Handbook of Clinical Neurology) Danièle Sommelet

One of the priorities of public health is to improve the equity of access to a continuous interdisciplinary medical and social survey of patients with chronic complex conditions, and, notably, the switch from pediatric to adult-oriented healthcare, including the specific issues of adolescence. In spite of the many barriers related to the patients, their family, pediatricians, and even adult health providers, the concept of a planned, dynamic, multidisciplinary transition program has to be designed around the adolescent with the aim of reinforcing his autonomy, coordinating medical care, and addressing his educational/professional and psychosocial needs. The primary care physician is the pivot of adult healthcare, and should have a close relationship with the private or hospital referent specialist and paramedical structures. A key worker may make an important contribution to the coordination, the registration, and the follow-up of some cohorts.
