Progress in Surgery of the Liver, Pancreas and Biliary System (Developments in Surgery)

Progress in Surgery of the Liver, Pancreas and Biliary System (Developments in Surgery)

This book reflects a broad spectrum of current opinions and progress in the surgical management of liver, pancreatic and biliary disease. The enormous advances in diagnostic imaging techniques and in interventional, radiological and biliary approaches, the pathophysiological problems and their management manifest often as complications in the post-operative period, new techniques and the results of surgical approaches are all thoroughly documented. Historical background is commented upon by Dr. Kenneth Warren of Boston in the first chapter. Subsequent chapters deal with a variety of subjects but always emphasizing differences of opinion and approach and maintaining the discussive environment so typical to the present-day approach to the topic. Professor Bengmark's efforts to introduce a forum for wide discussion for diseases of the liver, pancreas and biliary tract and many recent advances in research and technology to aspects of the clinical management and outcome of patients is well rewarded in this balanced publication. Advances in this field of surgery have been and continue to be so rapid that such documentation is not only necessary but very welcome.
