Recent Advances in Remote Sensing and Geoinformation Processing for Land Degradation Assessment (ISPRS Book Series)

Land degradation and desertification are amongst the most severe threats to human welfare and the environment, as they affect the livelihoods of some 2 billion people in the world's drylands, and they are directly connected to pressing global environmental problems, such as the loss of biological diversity or global climate change. Strategies to combat these processes and mitigate their effects at the land-management and policy level require spatially explicit, up-to-date information, which can be provided based on remote sensing data and using geoinformation processing techniques.

Recent Advances in Remote Sensing and Geoinformation Processing for Land Degradation

Assessment introduces the current state of the art in this field and provides an overview of both conceptual and technological advances of the recent past. With a specific focus on desertification and land degradation, the volume covers the assessment of related biophysical indicators, as well as complementary qualitative information at different spatial and temporal scales. It is shown how remote sensing data may be utilized in the context of assessing and monitoring affected ecosystems and how this information may be assimilated into integrated interpretation and modelling concepts. In addition, different case studies are provided to demonstrate the implementation of these methods in the frame of different local settings.

The volume will be of interest to scientists and students working at the interface of ecosystem services, land degradation/desertification, spatial ecology, remote sensing and spatial modelling, as well as to land managers and policy makers.

From reader reviews:

Phyllis Branson:

This Recent Advances in Remote Sensing and Geoinformation Processing for Land Degradation Assessment (ISPRS Book Series) usually are reliable for you who want to become a successful person, why. The key reason why of this Recent Advances in Remote Sensing and Geoinformation Processing for Land Degradation Assessment (ISPRS Book Series) can be one of the great books you must have will be giving you more than just simple studying food but feed an individual with information that probably will shock your preceding knowledge. This book is definitely handy, you can bring it almost everywhere and whenever your conditions in e-book and printed kinds. Beside that this Recent Advances in Remote Sensing and Geoinformation Processing for Land Degradation Assessment (ISPRS Book Series) forcing you to have an enormous of experience for example rich vocabulary, giving you trial run of critical thinking that we understand it useful in your day task. So , let's have it and revel in reading.

Herman Lewis:

Do you one of the book lovers? If yes, do you ever feeling doubt when you find yourself in the book store? Attempt to pick one book that you find out the inside because don't evaluate book by its protect may doesn't work this is difficult job because you are frightened that the inside maybe not while fantastic as in the outside search likes. Maybe you answer may be Recent Advances in Remote Sensing and Geoinformation Processing for Land Degradation Assessment (ISPRS Book Series) why because the amazing cover that make you consider concerning the content will not disappoint anyone. The inside or content is fantastic as the outside or even cover. Your reading sixth sense will directly assist you to pick up this book.

Thomas Llanos:

Are you kind of occupied person, only have 10 or perhaps 15 minute in your day to upgrading your mind expertise or thinking skill also analytical thinking? Then you are having problem with the book than can satisfy your short space of time to read it because all of this time you only find reserve that need more time to be read. Recent Advances in Remote Sensing and Geoinformation Processing for Land Degradation Assessment (ISPRS Book Series) can be your answer as it can be read by you who have those short time problems.

Ralph Capra:

As a scholar exactly feel bored for you to reading. If their teacher asked them to go to the library or to make summary for some publication, they are complained. Just tiny students that has reading's spirit or real their leisure activity. They just do what the professor want, like asked to go to the library. They go to right now there but nothing reading very seriously. Any students feel that reading through is not important, boring in addition to can't see colorful photographs on there. Yeah, it is being complicated. Book is very important for yourself. As we know that on this age, many ways to get whatever we would like. Likewise word says, ways

to reach Chinese's country. Therefore , this Recent Advances in Remote Sensing and Geoinformation Processing for Land Degradation Assessment (ISPRS Book Series) can make you experience more interested to read.
