Welding Practice (Workshop Technology)

Brian Smith

Welding Practice (Workshop Technology) Brian Smith

The book is aimed at those wishing to gain a basic knowledge of the practical aspects of the four most widely used welding processes: manual metal arc (MMA), metal inert/active gas (MIG/AG), tungsten inert gas (TIG) and oxy-acetylene welding and cutting. In addition to a detailed treatment of these four methods, further sections deal with the various angles at which welding can be carried out, the effect of the different materials, and quality assessment. Important safety information is collected into a preliminary section whilst highlighted safety warnings carry the safety theme through the entire text. Features to aid comprehension include a glossary of welding terms and symbols, self-assessment questions and a guide to current welder qualifications in the light of recent European standardisation.
