Our book introduces a method to evaluate the accuracy of trend estimation algorithms under conditions similar to those encountered in real time series processing. This method is based on Monte Carlo experiments with artificial time series numerically generated by an original algorithm. The second part of the book contains several automatic algorithms for trend estimation and time series partitioning. The source codes of the computer programs implementing these original automatic algorithms are given in the appendix and will be freely available on the web. The book contains clear statement of the conditions and the approximations under which the algorithms work, as well as the proper interpretation of their results. We illustrate the functioning of the analyzed algorithms by processing time series from astrophysics, finance, biophysics, and paleoclimatology. The numerical experiment method extensively used in our book is already in common use in computational and statistical physics.

From reader reviews:

Victor Kohlmeier:

In this 21st millennium, people become competitive in each way. By being competitive at this point, people have to do something to make them survive, being in the middle of the actual crowded place and notice by means of surrounding. One thing that often many people have underestimated the item for a while is reading. That's why, by reading a guide your ability to survive increase then having chance to stay than other is high. For you personally who want to start reading a new book, we give you this specific Automatic trend estimation (SpringerBriefs in Physics) book as starter and daily reading reserve. Why, because this book is usually more than just a book.

Doris Seavey:

This Automatic trend estimation (SpringerBriefs in Physics) tend to be reliable for you who want to become a successful person, why. The explanation of this Automatic trend estimation (SpringerBriefs in Physics) can be one of many great books you must have is usually giving you more than just simple reading food but feed you with information that might be will shock your earlier knowledge. This book is definitely handy, you can bring it everywhere you go and whenever your conditions in the e-book and printed versions. Beside that this Automatic trend estimation (SpringerBriefs in Physics) giving you an enormous of experience for instance rich vocabulary, giving you trial run of critical thinking that we all know it useful in your day task. So , let's have it and revel in reading.

Kathy Graves:

People live in this new day time of lifestyle always attempt to and must have the time or they will get lots of stress from both day to day life and work. So , if we ask do people have free time, we will say absolutely yes. People is human not really a robot. Then we consult again, what kind of activity have you got when the spare time coming to an individual of course your answer will certainly unlimited right. Then do you ever try this one, reading books. It can be your alternative with spending your spare time, often the book you have read is Automatic trend estimation (SpringerBriefs in Physics).

Martin Herrin:

In this age globalization it is important to someone to acquire information. The information will make a professional understand the condition of the world. The healthiness of the world makes the information simpler to share. You can find a lot of personal references to get information example: internet, newspaper, book, and soon. You will observe that now, a lot of publisher this print many kinds of book. Typically the book that recommended for your requirements is Automatic trend estimation (SpringerBriefs in Physics) this guide consist a lot of the information of the condition of this world now. This book was represented so why is the world has grown up. The words styles that writer use to explain it is easy to understand. The particular writer made some study when he makes this book. Here is why this book acceptable all of you.
